

Reviewer routing and recovery across 731 tasks

Mechanism analysis from final-valid trajectories · adaptive routing, not randomized ablation

(a) Reviewer routing

466 · 63.7%

265 · 36.3%

Independent Reviewer Engineer self-review

Reviewer routing selects the harder workload

2.75× Token · 1.80× active time

(b) Reviewer intervention and recovery

466

Reviewer-invoked tasks

35 blocked without a revision loop

388

accepted first review

43

revision requested

34

passed official verifier

22

strict Reviewer rescues

Strict rescue: Reviewer continue → Engineer revision → later Reviewer done

Group-level accuracy is intentionally omitted: Reviewer routing is conditional on task difficulty.
